Experience

Senior Full Stack Developer

2020 - 2024

360Ground 

- Developed a Permit Issuance System for Ethiopia, reducing processing time by 25% through microservices for notifications, an admin panel, and dynamic form creation.
- Digitized Ethiopia's Job Evaluation and Grading System, improving evaluation accuracy and speed by 50% with a graphical organizational chart builder.
- Designed the system architecture and implemented a crowdfunding platform for ESX; the project is currently ongoing.
- Contributed to the development of MedaPay, a seamlessly integratable payment gateway.
- Developed a Notification Microservice to streamline user communications via email and SMS.
- Built a Membership Management System for EMA, simplifying registration and member communication.
- Created a scalable backend for an Event Management System, ensuring secure event and customer data handling.
- Designed and implemented an Authentication Microservice for ATS, enabling seamless and secure user management.

Tech lead

04/2025

mereb technologies 

- Worked on a recruitment automation system that streamlined developer hiring by sending automated coding challenges, conducting AI-powered interviews, and parsing CVs for skill/experience matching.
- Improved hiring efficiency by providing recruiters with candidate performance insights and integrating seamlessly with existing ATS tools.

Senior Full Stack Developer

smartlink technologies

- Contributed in the development of the Oromia Court Management System, streamlining judicial workflows with a centralized case management platform.
- Implemented a real-time internal chat system, enabling secure communication between judges, clerks, and court staff.
- implemented a queue management system, optimizing hearing schedules, case processing, and courtroom workflows to reduce delays.
- Designed and implemented a secure device-based authentication system, where login attempts from new devices require approval from a previously trusted device by verifying the requesting device, ensuring that only authorized devices can access the system.

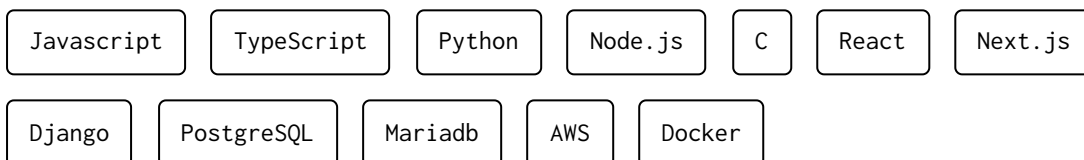

- Implemented comprehensive audit logging and activity tracking, improving transparency, accountability, and compliance across the judicial system.

Mobile and web Developer

Geobit

- Contributed in the development geospatial mapping features, enabling organizations to create, manage, and visualize custom areas of interest with interactive map-based tools.
- Built location-based data management services, allowing users to associate events, and assets with geographic locations in real time.
- Implemented a secure real-time chat system, enabling seamless communication and collaboration among members within organizations.
- Developed organization and team management modules, supporting role-based collaboration, workspace management, and secure information sharing.
